Azure Devops

Development environment using docker

ankitnarula1991@gmail.com

Development environment using docker

- Start MySQL as container and link it with WordPress website

- Create MySQL Container

docker run --name <database_name> -d -e MYSQL_ROOT_PASSWORD=<database_password> mysql:8

- **Check list of containers**

docker container ls

Development environment using docker

- **Create WordPress Container & link with MySQL Container**

docker run --name <Container-name> -d -p 4545:80 --link <First-Container-name>:<Link-name> wordpress

- **Check list of containers**

docker container ls

- Check WordPress Install

<VM-Public-ip>:<Port_Number>

- Note: When we need to any application in docker first we need to create the database container.
